**FAST CAST BRIDGE®
REPLACES DETERIORATED
BRIDGE THAT SERVES
AS A VITAL ARTERY FOR
RESIDENTS AND CLAREMORE
INDUSTRIAL PARK.**

THE CHALLENGE

The City of Claremore needed a solution for a deteriorated bridge that provided critical access between State Highway 66 and Highway 88 for emergency vehicles, school bus routes, residential travel, and access to its nearby industrial park. The bridge frequently flooded, causing closures and traffic detours.

THE SOLUTION

Premier Steel Services worked with Claremore engineers to custom-design and install a new 30-foot bridge with a pedestrian and bike lane for Lowry Road.

16420 S. Hwy. 75 | Glenpool, OK | 918-227-0110 | PremierSteelServices.com

THE PROCESS

Despite rainy conditions, the bridge was installed in less than eight hours by a local contractor selected by the City of Claremore. The Fast Cast Bridge can easily be installed by force account crews or contractors.

THE RESULTS

The Fast Cast Bridge was installed in two days, saving months over conventional construction. The quick construction allowed crews to focus on road repairs and restore traffic in April 2023, supporting millions of dollars in product each year.

“Quality and reliable infrastructure like the Fast Cast Bridge is crucial to ensuring our area business success and limiting business disruptions—not only in our park but for other organizations across the globe who depend on the products created right here in Claremore.”

— Meggie Froman-Knight, Executive Director
Claremore Industrial and Economic Development Authority

“Utilizing this innovative method significantly reduced the time needed for road closures, limiting disruptions for area residents and businesses.”

— John Feary, Claremore City Manager
